California Health & Safety Code, Chapter 6.95, Article 1, Sections 25503.5(a)(1)(D)	CATEGORY: BUSINESS PLAN PROGRAM

STATEMENT OF PURPOSE

To provide guidance to be used by Cal/EPA, CUPAs, and regulated businesses to ensure that critical information about regulated solids and liquids are consistently collected and reported.

BACKGROUND

Cal/EPA oversees the administration of the Unified Hazardous Waste and Hazardous Materials Management Program (Unified Program), a legislatively created consolidation of six hazardous waste and materials programs administered by state and local agencies. The intent of the program is to improve consistency and uniformity in administration, permitting, inspection and enforcement. The Hazardous Materials Release Response Plans and Inventories Program (HMBP) is one of the six programs. Pursuant to the HMBP Program, each CUPA is required to inspect businesses that meet the requirements of the program. All businesses that handle hazardous materials in quantities equal to or greater than 55 gallons, 500 pounds, or 200 cubic feet of gas at standard temperature and pressure or quantities of extremely hazardous substances above the threshold planning quantity, are required to inventory their hazardous materials, develop a site map, develop an emergency plan and implement a training program for employees. Businesses must submit this information to the CUPAs. The CUPA verifies the information and provides it to agencies responsible for protection of public health, safety and the environment.

ANALYSIS

Assembly Bill 408, Wieckowski (AB 408) was Chaptered by the Secretary of State as Chapter 603, Statutes of 2011 on October 8, 2011, and took effect immediately as an urgency statute. AB408 amends Chapter 6.95 of the Health and Safety Code by adding subparagraph (E) to paragraph (1) of subsection (a), section 25503.5. This section raised the reporting thresholds for certain solids and liquids from 500 pounds or 55 gallons to 5,000 pounds.

Conditions of increased reporting threshold

In order to be eligible for the increased reporting threshold of total weight of 5,000 pounds provided under subparagraph (D), a substance must be:

- Either a solid or liquid;
- Classified as a hazard for purposes of 8 CCR 5194 solely as either an irritant or sensitizer; and
- Not be a hazardous waste (8 CCR 5194 (b)(5)(A)).

The Hazardous Materials Business Plan Technical Advisory Group (TAG) and the Hazardous Materials Steering Committee developed a standard for classifying solids and liquids. The Office of Environmental Health Hazard Assessment reviewed the standard and agreed with the result.

The attached guidance document is published for use by businesses and Unified Program Agencies.

ACTION PLAN

1. The Guidance for Hazard Classification - Solids & Liquids guidance document will be available on-line at the Cal/EPA website.
2. CUPA's are encouraged to inform regulated businesses in their jurisdiction of this guidance document and to post or link to it on their websites.

Guidance for Hazard Classification – Solids & Liquids

Pursuant to Health and Safety Code 25503.5(a)(1)(D)

Background

Assembly Bill 408, Wieckowski (AB 408) was Chaptered by the Secretary of State as Chapter 603, Statutes of 2011 on October 8, 2011, and took effect immediately as an urgency statute. AB408 amends Chapter 6.95 of the Health and Safety Code (HSC) by adding the following subparagraph (D) to paragraph (1) of subsection (a), section 25503.5.

(D) A total weight of 5,000 pounds, if the hazardous material is a solid or liquid substance that is classified as a hazard for purposes of Section 5194 of Title 8 of the California Code of Regulations solely as an irritant or sensitizer, unless the administering agency finds, and provides notice to the business handling the product, that the handling of lesser quantities of that hazardous material requires the submission of a business plan, or any portion thereof, in response to public health, safety, or environmental concerns.

Purpose

The Hazardous Material Business Plan Technical Advisory Group (HMBP TAG) has determined that guidance is needed for businesses and Unified Program Agencies (UPAs) to consistently classify solid or liquid substances pursuant to subparagraph (D). A business may choose not to perform this classification process if it is not seeking the increased reporting thresholds provided under subparagraph (D). In accordance with paragraph (3) of subsection (a) of section 25503.5, the UPA shall make the findings required by subparagraph (D) in consultation with the local fire chief.

Definition of key terms¹

“Substance” means

Any element, chemical compound or mixture of elements and/or compounds.

“Health hazard” means:

A substance for which there is statistically significant evidence based on at least one study conducted in accordance with established scientific principles that acute or chronic health effects may occur in exposed employees. The term "health hazard" includes substances which are carcinogens, toxic or highly toxic agents, reproductive toxins, irritants, corrosives, sensitizers, hepatotoxins, nephrotoxins, neurotoxins, agents which act on the hematopoietic system, and agents which damage the lungs, skin, eyes, or mucous membranes. Further definitions and explanations of the scope of health hazards are listed in 8 CCR 5194(c) and Appendix A to Section 5194.

¹ Title 8 California Code of Regulations, Division 1, Chapter 4, Subchapter 7, Group 16, Article 109, Section 5194

“Physical hazard” means:

A substance for which there is scientifically valid evidence that it is a combustible liquid, a compressed gas, explosive, flammable, an organic peroxide, an oxidizer, pyrophoric, unstable (reactive) or water-reactive. Definitions of the specific categories of physical hazards are listed in 8 CCR 5194(c).

Conditions of increased reporting threshold

In order to be eligible for the increased reporting threshold of total weight of 5,000 pounds provided under subparagraph (D), a substance must be:

- Either a solid or liquid;
- Classified as a hazard for purposes of 8 CCR 5194 solely as either an irritant or sensitizer; and
- Not be a hazardous waste (8 CCR 5194 (b)(5)(A)).

Discussion

Subsection (d) of 8 CCR 5194 establishes the requirement and criteria for manufacturers and importers to evaluate the substances they produce or import to determine if they are hazardous. In addition, health hazards must be defined and determined as mandated in 8 CCR 5194 Appendices A and B. Employers are not required to evaluate substances unless they choose not to rely on the evaluation performed by the manufacturer or importer for the substance to satisfy this requirement. The results of hazard evaluations conducted by manufacturers and importers are provided to employers in the form of:

- Labels and Other Forms of Warning, pursuant to 8 CCR 5194(f); and
- Material Safety Data Sheets, pursuant to 8 CCR 5194(f).

Many substances that are irritants or sensitizers also have other health hazards or physical hazards and are therefore ineligible for the higher reporting threshold provided under subparagraph (D). For example, products containing silica have associated target organ effects or are listed as carcinogens. Refer to the OSHA webpage on silica² and interpretative letters^{3, 4} for more information regarding silica.

Table 3.1 of Annex VI to Regulation (EC) No 1272/2008 contains the hazard classification and labeling requirements for certain substances which are legally binding within the European Union. Attachment 1 lists those substances in Table 3.1 for which the sole physical and health hazards as classified under the EC Regulation are as irritants and/or sensitizers (aquatic effects are not hazards for the purposes of 8 CCR 5194).⁵

The following procedure is recommended to determine whether a substance on Attachment 1, or another substance or mixture of substances are classified solely as an irritant or sensitizer for the purposes of 8 CCR 5194.

Recommended Procedure for Determining Hazard Classes

Review the Material Safety Data Sheet (MSDS) to classify the hazards of a candidate substance. The format and content of an MSDS varies according to the standard used in preparing it. Most are organized into 16 sections with common section headings. A *Comparison of MSDS/SDS Elements* in these different formats is available on the OSHA website⁶.

A partial list of pertinent MSDS elements for hazard classification is provided in the table below. Due to variation in formats, these elements may not be included on the MSDS or located in a different section. Although some MSDS elements such as DOT Label and Hazard Class are not directly referenced in 8 CCR 5194, they provide a method for quickly determining the physical or health hazards of a substance.
